# Quick Guide

## Freestanding Showers

### ▶ WHAT ARE THEY?

Emergency showers are essential pieces of first aid equipment in many industrial environments where workers may be exposed to harsh and hazardous substances. Freestanding showers, as the name suggests, do not need to be fixed to a wall, making them a very versatile option for many work spaces.

### ▶ ADVANTAGES OF SSP FREESTANDING SHOWERS

- 1. Meet and exceed ASNI and EN standards** making them suitable for even the most hazardous environments.
- 2. They are reliable and durable.** Their fully stainless steel design means that they are durable (they can last up to 10 years if maintained correctly).
- 3. Customisable.** A huge range of alarms, eye-shower and activation systems can be added to the base unit, meaning the showers can be customised to meet the requirements of any health and safety policy, however rigorous.
- 4. Frost protected** versions available as well as versions for extremely hot environments.

### ▶ APPLICATIONS

Freestanding showers are commonly used in smaller workspaces such as laboratories, in awkward spaces, on upper floor levels or when companies may want flexibility to be able to move the showers around according to changes in the needs of the work-site.

Accessories include: activation platforms & eye washes

The **Safety Shower People** have a wide range of safety shower equipment solutions that will meet both ANSI and EN shower standards. Call us today to discuss your emergency shower requirements.
